Summary of Hydrogel & Quantum Dot Nanotechnology Characteristics

Source: https://shepherdsheart.life/blogs/behind-the-scenes-with-celeste/behind-the-scenes-with-celeste-8-24-2020

Celeste Solum Former 20 yr FEMA Officer Created this summary based on the information found in dozens of scientific peer reviewed studies and articles.

Mechanical Tooling Robots

Force Clamps: Robotic clamps that will forcibly hold synthetic edits into your body structure until they are fused.

Pylons: Robotic towers are erected that will be used to bring electrical impulses into your body including the structure used to support the nano particles injecting their payload into your body.

Calipers: Robotic instrument for measuring external or internal dimensions, having two hinged legs resembling a pair of compasses and in-turned or out-turned points. Internal locusts anyone?

Information Relays Robots

Robotic Networks: Robots whose task will be to connect (link) you with artificial intelligence, people, and things.

Nanoactuators: A robotic device for moving or controlling you.

Accordion Racks: Robots with angle comprised of 6-by-6 meshes (666) controlled by the length of the DNA locks. A. This is a DNA locking system, once they have you where they want you.

Robotic Domino Arrays: A robotic reconfigurable DNA origami domino array (DODA), which is a set of keys (DNA strands) that added to your DNA using cryptographic data. There is an ownership transfer of keys once these arrays are set up. Remember, Jesus holds the keys to life and death.

Nano Medical Robots

Robotic Imaging tools: Robotic imaging software is a type of graphic design software inserted into your body that is used to create, edit and manipulate images into your body. Consider, you are created in the Divine Image. Do you want another image in your body?

Robotic Antibody Sensors: Antibody-based robots permit the rapid and sensitive analysis of a range of pathogens and associated toxins and transfer of this data directly to Public Health, from deep inside your body without you ever knowing about it.

Robotic Pliers: Robots with small pincers like a crab for holding small objects or for bending and cutting wire, used in the retooling and rewiring of your body.

Nanorobots: Nanoscopic robots about the size of an atom.

Robotic Encapsulation: Robots that are enclosing or sequestering your God given biological processes from the growing hydrogel.

Robotic NanoCages: Robots that 3D chains that cage you. These chains cage your proteins and are tunable to various frequencies.

Photonics /Plasmonics Robots

Robotic Meta-molecule beacons: Hybridized robotic probes that are used in a real-time targeting of your DNA using florescent dyes.

Robotic AU NR Walkers: Robots that insert synthetic DNA-based motors into your body.

Robotic Nanoclocks: A shapeshifting flexible or "metamorphic" nanodevice, independently controllable elements, that can rotate- enlarging or contracting the total surface area of the device, with or without altering the enclosed volume of the entire nanomachine. It maintains the structural integrity of the hydrogel away from your soon to be dead body.

External Field Driven Robots

Robotic arms and claws: Robots with arms and claws deployed into your body to grab whatever they are told to seize and mangle.

Robotic Nanohinges: A robot that will hinge synthetic materials to your body until your body becomes one with it (fusing).

Robotic Nanorotors: A robot that can change the spin of electrons and atoms in your body.

Robotic Swimmers: Robots that either can move on solids or swim in fluids when exposed to a physical or chemical stimulus. Untethered small-scale swimmers, which include both small-scale robots and motors, are tiny architectures made of a single micro- or nanostructures. They will be sold to you as microscopic nanobots swimming around in our bloodstream monitoring our health, clearing debris and toxins and keeping us healthy from the inside out.

Autonomous Robots

Robotic Walkers/Motors: Tiny biological robots that “walk” on filaments in your body to deploy payloads.

Robotic Rotary Apparatus: A robot that has an upper and a lower chamber. Think of this as a counterfeit heaven and hell in your body. The compartments are kept distinct while the hydrogel grows and takes over your body.

Interacting Dynamic Robotic Populations: Control task of robots interaction with a dynamic environment based on the stability of a closed-loop control system, such as your immune system. Think of these as internal Slaughterbots.

These are types of Robots will crawl through your body when you take anything with hydrogel or quantum dot.

These robots multiply and take over your body and turn you from a human into a synthetic entity.

This does not include the following that will be included in the vaccine according to Rocky Mountain Laboratories, a NIH Lab in Hamilton, MT:

- Aborted babies
- Humanized mice
- Humanized plants
- Sterilization chemical
- Drug cocktail to combat non-communicable diseases such as obesity, heart disease, and diabetes
- CRISPR technologies

If you allow them in, you cannot get them out.

What can you do? Say NO to anything with hydrogel or Quantum Dot. This includes testing, vaccinations, and medications. You are the the Image Bearer and Ambassador of Jesus Christ. You cannot allow Legions of robots and strange images into your body.
